Reverse Total Shoulder Arthroplasty for CT Arthrogram

Please contact Dr. Rodriguez for guidance if you come across a patient with this type of shoulder replacement.

***If the patient has had a joint replacement, they must have a CT of the affected joint prior to the Arthrogram with CT.

Dr. Rodriguez has provided this image to show the 2 possible spots that the needle should be placed. See arrow points.

The needle should still be perpendicular and superior to the “V” shape between the “Ball and Socket”
