NOTE:
- Perform the T2 and GRE weighted sequences after contrast administration and before any post contrast T1 weighted sequence.
- The T1 post contrast Axial sequence should be acquired last.

### T1 Sagittal

**Average Scanning Parameters:**
- 230mm FOV
- 5x2mm slice
- 19 slices

- Oblique as needed to obtain true sagittal images.

### Diffusion Axial with ADC Map

**Average Scanning Parameters:**
- 230 mm FOV
- 5x1mm slice
- 24 slices

- Oblique as needed to obtain true axial images.

### Axials: FLAIR, T2 FS, T1 FS Post Contrast

**Average Scanning Parameters:**
- 220 mm FOV
- 5x1mm slice
- 24 slices

- Oblique as needed to obtain true axial images.
  - SETON NETWORK ONLY * Add GRE Axial

### Coronals: GRE, T2 FS, T1 FS Post Contrast

**Average Scanning Parameters:**
- 200 mm FOV
- 5x1mm slice
- 28 slices

- Oblique as needed to obtain true coronal images.
